Proteus Portable Diversity Receiver

D-Atks System

Communication for remote troupes

Situation awareness has always been the key point for successful troupes, as well as a necessary asset for on-field law enforcement operators

IPR has developed an innovative easy deployable diversity receiver system in a rugged plastic trolley box

Image quality is enhanced thanks to the introduction of a 2-ways diversity architecture provided with two omnidirectional antennas (panels are also available belonging to the environmental conditions)

Pre-amplifiers make it possible to use antenna cables as long as 44m

The extreme flexibility, transportability and compact size, make it possible to use it whenever the implementation of a fixed receiving station is not suitable

Main sub-assemblies:

- Rugged compact size plastic trolley case
- 2 x omnidirectional antennas (panels on request)

Reliable personalized solutions

All critical technologies' parts are developed produced and integrated by IPR providing an utmost degree of customization: systems can be tailored to end users' specific layout and weight requirements

IPR systems have no ITAR restrictions
